

SmartCheck

A security risk assessment tool for Consultants

SmartCheck allows consultants and service providers to expand and optimise their ability to provide cyber security assessments, ransomware readiness reviews and a range of other audit services through the use of a simple automated cyber security risk assessment tool.

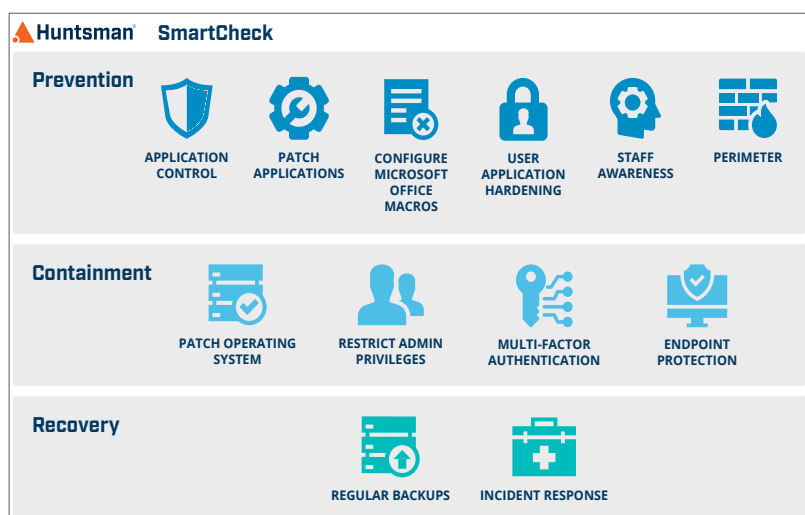

Benefits

- ▶ Quick delivery and revenue, through automated risk assessments
- ▶ Benchmarks clients against 12 controls, based on NCSC advice
- ▶ Quantitative reports based on all relevant data in minutes
- ▶ Maximised value-added service opportunities

SmartCheck allows the easy provision of cyber security risk assessments and other services with or without the need to undertake site visits.

It automatically measures 12 key controls that align to the defensive Prevention, Containment and Recovery sequence.

Easy to install and use, it quickly interrogates IT systems to measure and report on the effectiveness of key security controls.

▶ How does it work?

SmartCheck is a desktop application that equips consultants to offer ransomware readiness assessments, provide remediation 'to do' lists and deliver technical and executive focused risk reports. It delivers quantitative metrics and security control status reports without the need for extensive time on-site, travel and lengthy information gathering.

▶ What is it based on?

SmartCheck aligns with the primary guidance from NCSC and NIST:

[NCSC Mitigating malware and ransomware attacks](#)

[NIST IR 8374 Ransomware guidance framework](#)

SmartCheck provides excellent value-add with high fidelity control and risk information for minimal effort and expense

Security Assessment Framework

► Why should you adopt it?

The key features for consultants and service providers are:

- Quickly identify vulnerabilities and configuration issues to generate a 'to-do' list for clients or consultants that advises on performance analysis and remediation actions
- Measures and reports on ransomware readiness, for managers and directors – to support governance & risk management processes
- Supports profitable revenue generation and specific follow-on activities to improve client's security posture
- Opens new opportunities for cost-effective and innovative security services

► How to use it?

SmartCheck can be used by the consultant or client; and managed on-premise or remotely.

It expands the reach of consultants by delivering verifiable technical results that can equip your consultants to offer risk reporting services without needing additional specialist staff.

It examines your client's existing security controls to provide clear and informative cyber security risk reports that highlight any weaknesses and inform of any necessary improvements in policy and security posture. The reports enable consultants to work with their client through a structured remediation and uplift program.

SmartCheck means that consultancies can easily scale their resources across multiple sites and geographies - and remotely consolidate multiple inputs to achieve a single and comprehensive risk assessment report.
